## About us

SeeCubic Inc. is an accomplished deep tech company founded to become a global leader in immersive display technology innovation. SeeCubic has created an unparalleled end-to-end spatial display technology for rendering and displaying content in lifelike rich and natural three dimensions on any type of screen.

The SeeCubic technology consists of integrated hardware components - a complex lenticular structure embedded onto the display panel and dedicated internal electronics - combined with proprietary software to create an endless variety of never-before-seen visual experiences. Our innovations go far beyond any of the earlier attempts to display visuals in three dimensions, including cinematic 3D which was popular in the past decade. The effect, superior to all others in both precision and detail, can be enjoyed on a TV, tablet, computer screen or phone without any glasses or peripherals - you can see the transformative SeeCube advantage with the naked eye.

incredible value to consumers, all of the available content will be instantly accessible on all SeeCube-enabled devices. The environment offers a pathway for movie studios and other content right holders to produce and convert every type of existing 2D or cinematic 3D content into our spatial display format, vastly increasing potential monetization.

SeeCubic is currently focused on working together with top-tier home and mobile device brands via strategic partnerships to deliver spectacular viewing experiences to all consumers. We are bringing our technology to all popular device types we all use on a daily basis – televisions, mobile devices, computer screens, and even in-car displays. With the transformative ability to display depth-infused movies, events, sports and video games, our technology is poised to become a mainstream feature of entertainment both at home and on the go.
